

TempleERP – Project Documentation

Overview

TempleERP is a web-based Temple Management System developed using ASP.NET Core MVC and SQL Server. The application simplifies and automates daily temple administration activities such as pooja booking, inventory management, payment tracking, devotee management, and report generation.

Objectives

- Digitize temple administration processes
- Reduce manual record maintenance
- Improve operational efficiency
- Maintain accurate financial and inventory records
- Provide secure role-based system access

Technologies Used

- ASP.NET Core MVC
- C#
- SQL Server
- Entity Framework Core
- Bootstrap
- HTML, CSS, JavaScript
- jQuery

Key Modules

1. Pooja Management

- Create and manage pooja details
- Schedule pooja bookings
- Track pooja payments

2. Devotee Management

- Maintain devotee records
- Store contact and booking information
- Search and manage devotee history

3. Inventory Management

- Manage temple items and stock
- Track item availability
- Maintain category-wise inventory

4. Payment Management

- Record pooja and donation payments
- Generate payment receipts
- Track financial transactions

5. User & Role Management

- Secure login system
- Role-based access control
- Admin and staff authorization

6. Reports

- Daily transaction reports
- Inventory reports
- Booking and payment summaries

Features

- Responsive user interface
- CRUD operations
- Authentication and authorization
- Database-driven workflows
- Validation and error handling
- Secure transaction processing

Benefits

- Easy temple administration
- Improved record accuracy
- Reduced paperwork
- Faster booking and payment processing
- Better operational monitoring

Conclusion

TempleERP provides an efficient and scalable solution for managing temple activities digitally. The system improves productivity, enhances user experience, and simplifies daily operational management for temple administrators and staff.
